Erland Completes New Corporate Headquarters for Palomar

BURLINGTON, MA – Erland Construction, Inc. has completed construction of the new 130,000sf corporate headquarters for Palomar Medical Technologies, Inc. in Burlington, Massachusetts. Palomar acquired the site for their new building – located in the Network Drive campus – from Nordblom Company, who assisted during preconstruction planning and served as the owner’s project manager during construction. Teaming with architect Spagnolo Gisness & Associates of Boston, Erland finished the project in just over one year.

Palomar’s new structure features multi-level space. The north section of the building has a single-story manufacturing floor and the south section has three floors of offices and laboratories. Classified as non-surgical clinical areas, the labs require HEPA air filtration. The dramatic main entrance showcases distinctive finishes, glass curtain wall, and aluminum panels.

“Nordblom has been a longtime client of ours and we’re happy that we had the opportunity to work with them again and to complete this important project for Palomar,” said Erland’s vice president and key account executive, Tom Blesso. “We’re so proud of this new building, which is right down the road from our own corporate headquarters in Burlington.”

Founded in 1991, Palomar Medical Technologies, Inc. produces the world’s most advanced laser and pulsed light systems for aesthetic applications such as laser-assisted lipolysis, permanent hair reduction, fractional non-ablative and ablative skin resurfacing, photofacials for pigmented and vascular lesions, fractional skin tightening through soft tissue coagulation, leg vein and acne treatment, and tattoo removal. Recognized as the new Gold Standard in laser and pulsed light technology, Palomar’s systems offer exceptional value, versatility, efficacy, ease of use, and patient comfort and safety.

Erland Construction, with offices in Burlington, Massachusetts and East Windsor, Connecticut, is the region’s leading open shop construction management, program management, design/build, and general contracting firm. The company has the specialized expertise for new construction, additions, and renovations in major market sectors including academic, residential, commercial, and healthcare.
